

PHYSICAL COMPANY'S DISINFECTANT WIPE PROVEN TO KILL INFLUENZA A H1N1 SWINE FLU

Physical Company Ltd is delighted to advise that our Pro Gym Wipe formulation, has been proven by an independent laboratory to KILL the Influenza A H1N1 Swine Flu virus.

Tests were carried out by Blu Scientific, which is affiliated to Glasgow Caledonian University. The Supervisor for these tests was Dr. Chris Woodall PhD, Lead Investigator/Lecturer in Virology in the School of Life Sciences at GCU (UK). He has extensive experience in (molecular) virology, virus detection, disinfectant efficacy testing, test development and quality control management.

Dr Woodall confirmed this week that the testing carried out in 2002, ensures efficacy against this new strain / mutation of the H1N1 virus. He explained that the new strain of the virus has mutated internally; however, the outer shell has remained the same. As the Physical Company Pro Gym Wipe solution kills by attacking and destroying this outer protective shell, our formulation will prove to be effective.

The latest Government advice to limit the spread of the H1N1 virus is to regularly sanitize hands and disinfect all surfaces particularly door handles, keyboards, telephones etc. to avoid cross contamination. Physical Company Pro Gym Wipe comprehensive range of disinfectant wipes are available in various sizes and convenient packaging, all of which are easily portable.

Please do not hesitate to contact a Physical Company representative for any additional information you may require
